

Artificial Intelligence, Algorithmic Decision-Making & Big Data (AI-X) Team

Advising on Regulations and Risk Management. Measuring and Mitigating Unintended Bias. Delivering Peace of Mind.

Regardless of industry, chances are good that your organization is employing artificial intelligence or algorithms to help make important business decisions. As policymakers continue to address concerns about these tools — particularly their potential for producing unintended bias — your organization may be exposed to **significant regulatory, litigation and reputational risk**, with no clear understanding of how to protect itself. **We're here to help.** We combine the regulatory and litigation experience of attorneys who have advised clients on these issues for years with the data scientists at Tritura, Faegre Drinker's AI subsidiary, who understand the innerworkings of these technologies and can test your algorithms for unintended bias. With this interdisciplinary approach, we help you **leverage the power of AI and algorithms** in a safe, legal and ethical manner, understand the risks related to automated decision-making, respond to emerging laws and regulations, and keep up with industry best practices.

Inform

We help you stay on top of emerging laws, regulations, best practices and industry standards that could impact your organization.

Local, state and federal laws and initiatives

International standards

Academic research

Industry proposals

Protect

We partner with you to build a risk management framework that will identify, monitor and mitigate risks related to AI and algorithms — and adapt to new regulations.

AI and data consulting

Algorithmic testing and validation

Risk management and corporate governance

Connect

We help you connect with the regulatory, academic, consumer rights, data science and industry leaders at the forefront of these issues.

Industry engagement

Thought leadership

Support Across Relevant Industries & Topics

Insurance

Financial services

Data licensing and strategy

Labor and employment

Health and life sciences

Intellectual property
